SUBJECT; HCI & COMPUTER GRAPHIC

DATE; 05/09/2026

DEPT; COMPUTER SCIENCE

Slide/Image(HCI Focus); Point out 3 interaction elements or briefly explain how they help the user.

01.Zoom In/Out controls

→ Allow the user to move closer to or farther away from the Earth.

02.Search bar

→ Allows the user to search for a specific place or location.

03.Navigation/Rotate controls

→ Allow the user to rotate and change the viewing direction.

IMAGE 02. COMPUTER GRAPHICS(3D RENDERING FEATURES)

01.3D Buildings:

Displays buildings in 3D, making cities and structures look more realistic.

02.3D Terrain/Mountains:

Shows mountains and landforms in 3D, making their height and shape easier to understand.

03.Satellite Imagery:

Uses real images of the Earth's surface to provide a detailed and realistic view of places.

STEP 03. ANSWER 2 SHORT REFLECTION QUESTION

01. HOW DOES THE COMPUTER GRAPHICS QUALITY HELP OR HINDER TE USER’S ABILITY TO INTERACT WITH THE SOFTWARE.

The realistic 3D view helps users understand mountains, buildings, and other places more easily. Detailed graphics make navigation and exploration more engaging, although high-quality graphics may sometimes make the software slower on less powerful computers.

02. WHAT IS ONE SIMPLE HCI CHANGE YOU WOULD MAKE TO IMPROVE THE USER’S INTERFACE.

I would improve the interface by making the navigation and zoom controls more clearly visible and

easier to understand for new users. This would help users interact with Google Earth more quickly and confidently.

THE END
